Sonal Kamble

845-745-6662 | sonal@sonalkamble.dev | sonalkamble.dev | LinkedIn | GitHub | New York, NY

Education

State University of New York – New Paltz — New Paltz, NY
MS in Computer Science – GPA: 3.80/4.00 — *Jan. 2025 – May 2026*

Sunbeam Institute of Technology (CDAC) — Pune, India
PG Diploma in Advanced Computing — *Aug. 2021 – Apr. 2022*

DY Patil's Ramrao Adik Institute of Technology — Navi Mumbai, India
Bachelor of Engineering – Electronics & Telecommunication — *Aug. 2017 – May 2021*

Experience

Teaching Assistant – CS3 (Data Structures & Algorithms) and C/C++ — Aug. 2025 – May 2026
SUNY New Paltz — *New Paltz, NY*

- Conducted comprehensive code reviews and pair programming sessions for **50+ students**, providing targeted feedback on algorithmic complexity, memory management, and design clarity.
- Designed and evaluated technical assessments measuring correctness and testability, effectively reinforcing production-grade engineering principles across **Java, C, and C++**.

Volunteer AI Engineer & Web Developer — Jun. 2025 – May 2026
Non-Profit Organizations — *New Paltz, NY*

- Engineered custom **AI-driven solutions** utilizing Generative AI (LLMs) to automate operational workflows, significantly enhancing community service delivery and data processing efficiency.
- Owned full-stack reliability for **6 live production websites**, diagnosing and resolving critical failures across DNS/SSL configurations, database scaling, and CI/CD deployment pipelines.
- Led interactive AI training workshops for administrative staff, empowering non-technical users to leverage AI tools for accelerated productivity.

Software Engineer – Development — Dec. 2023 – Feb. 2024
Pansuriya Impex (HK) Ltd. — *HQ: Hong Kong*

- Architected and delivered **100+ production-ready RESTful API** endpoints using **Java/Spring Boot** for complex transactional workflows spanning dynamic pricing, inventory, and order management.
- Implemented robust security and compliance standards, enforcing JWT-based authentication flows, rigorous payload validation, and structured error handling for auditable state transitions.
- Engineered a resilient **Java-based scheduler** for automated API retry logic and background processing, eliminating manual intervention and boosting system fault tolerance.

Associate Software Engineer – Development — May 2022 – Nov. 2023
SAS Research & Development Pvt. Ltd. — *HQ: North Carolina, USA*

- Developed scalable **Java/Spring Boot** REST endpoints for the Retail Gateway, successfully supporting high-volume downstream integrations within a distributed enterprise architecture.
- Authored comprehensive **JUnit test suites** for legacy and new microservices, drastically improving regression coverage and ensuring absolute correctness across continuous incremental releases.
- Collaborated within a fast-paced **Agile/Scrum** environment, executing meticulous code reviews and sprint planning to optimize system reliability, throughput, and feature delivery.

Projects

Aura – Relational Intelligence Engine | *Java 21, Spring Boot 3, PostgreSQL, WebSockets, Docker* — Spring 2026

- Engineered a sophisticated Dockerized Spring Boot platform implementing research-backed clinical frameworks (Gottman, EFT) with a custom **psychometric modeling engine**.
- Integrated **Google Gemini Flash** AI for real-time relational pattern detection, utilizing exponential smoothing and behavioral cross-correlation to identify complex psychological dynamics.
- Architected a **Privacy-First backend** with custom JPA encryption converters, ensuring zero-latency partner data synchronization via **STOMP WebSockets** and a responsive Vanilla JS UI.

Little Ones Learning Center – Custom CMS | *Java 21, Spring Boot 3, Vanilla JS, MySQL, Docker*

- Migrated a legacy platform to a high-performance decoupled architecture, reducing network requests by **85%** and establishing near-instant page load times via a global CDN.
- Engineered a secure **Java Spring Boot REST API** featuring Token-based Authentication, dynamic SEO metadata injection, and an automated cloud media asset manager.
- Built a responsive Headless Client and admin dashboard, empowering non-technical staff to seamlessly manage relational data and media via optimized **MySQL** transactions.

Technical Skills

Languages: Java 21, JavaScript (ES6+), SQL (PostgreSQL, MySQL), Python, PHP, C, C++, HTML5, CSS3
Frameworks & Libraries: Spring Boot 3, React 19, Node.js, Express.js, Spring Data JPA, Htmx, Thymeleaf, JUnit
Databases: PostgreSQL, MySQL, MongoDB, Mongoose ODM
Tools & Platforms: Docker, Render / Koyeb, Git/GitHub, GitHub Actions, STOMP WebSockets, Postman, IntelliJ IDEA, VS Code
Concepts: Generative AI, LLM Integration, REST API Architecture, JWT Security, OOP, SOLID Principles, Distributed Systems, Agile
